FOR IMMEDIATE RELEASE

Hawaii Pacific Teleport Launches New Training Business, Hawaii Satellite Center; To Offer First Satellite Training Course in Paradise-like Setting

Kapolei, Hawaii, 14 April 2008. Hawaii Pacific Teleport, the largest independent teleport in the Pacific Ocean region, is launching its new training business called Hawaii Satellite Center (HSC). The first course to be offered by HSC is a satellite technology appreciation course dubbed "Satcom Essentials." The course will be conducted over a two-day weekend in a paradise-like setting at the newly-refurbished training center at the Hawaii Pacific Teleport complex in Kapolei, Hawaii. The first course is scheduled for the weekend of May 31st, 2008 and will be limited to 60 participants on a first-come, first-served basis.

The "Satcom Essentials" course offers an innovative training methodology by mixing hands-on experience in a working teleport and technical and marketing sessions provided by leading industry authors and resource persons that include Bruce Elbert, President of Application Technology Strategy, Inc., Bill Allen of Allen Communications, Vince Waterson, Vice-President of Hawaii Satellite Center and Virgil Labrador, Editor-in-Chief of *Satellite Markets and Research*. The course content features sessions on satellite theory and regulation, satellite services marketing and business opportunities, among others.

There will also be ample opportunities for networking during the hospitality events built around the course in seaside location like no other. On the first evening delegates are treated to a *Luau*, a traditional Hawaiian feast, which is included in the course fees. The courses are on Saturday and Sunday however for those who wish to add on a day of golf or other leisure activities after the course HSC can make the necessary arrangements. HSC can also provide custom sightseeing trips around the tropical island of Oahu for spouses attending the course.

HSC has produced a video promoting its new concept for training in satellite communications. The video can be viewed at www.hawaisatellitecenter.com and can also be found on YouTube (www.youtube.com) by entering the search phrase 'satellite training'.

The Hawaii Satellite Center courses provide a unique opportunity for engineers, managers and entrepreneurs to get a deeper appreciation and understanding of satellite technology on an island setting which many describe as a close to paradise as we are likely to get.
